Comparing Cassava

Submitted by Ibork on November 13, 2015

Two women farmers and a male extension worker compare impressive yields from two different cassava varieties they grew with help from USAID as part of the Feed the Future initiative. With Feed the Future's support, Haitian women in the southwestern part of the country have tripled their cassava yields, enabling them to market excess production and establish a small cassava flour production facility. Not only are these cassava varieties higher yielding, they are also drought resistant. *Photo by Ron Savage, USAID*
